

China Combined Heat and Power (CHP, Cogeneration) Industry Report (2016–2021), Market Prospect and Investment Strategic Planning

目 录

CONTENTS

Chapter 1: PEST analysis of China's cogeneration industry

1.1 definition and characteristics of cogeneration industry

- 1.1.1 definition of cogeneration industry
- 1.1.2 characteristics of cogeneration industry
- 1.1.3 research scope of the report

1.2 policy environment of cogeneration industry

- 1.2.1 interpretation of related policies of cogeneration industry
- 1.2.2 summary of policy environment of cogeneration industry

1.3 economic environment of cogeneration industry

- 1.3.1 analysis of national economic environment
 - (1) the steady development of the national economy
 - (2) the moderation and stabilization of industrial production
 - (3) rapid growth of social investment
- 1.3.2 correlation between cogeneration and economic development

1.4 social environment of cogeneration industry

- 1.4.1 energy consumption of the whole society
- 1.4.2 energy pressure of the whole society
- 1.4.3 status quo of the whole social environment
- 1.4.4 correlation between cogeneration and energy saving

1.5 technical environment of cogeneration industry

- 1.5.1 analysis of patents of cogeneration industry
 - (1) quantity of yearly patent applications
 - (2) quantity of yearly patent disclosures
 - (3) analysis of patent applicants
 - (4) analysis of constituents of patented technologies

Chapter 2: Analysis of status quo of development and energy efficiency of China's cogeneration industry

2.1 analysis of supply and demand of thermal power market

- 2.1.1 analysis of consumer demand of thermal power market
 - (1) total consumption of thermal power
 - (2) structure of consumption of thermal power

2.2 analysis of status quo of development of cogeneration

- 2.2.1 status quo of central heating of urban cogeneration
 - (1) capacity of urban steam central heating
 - (2) total volume of urban steam central heating
 - (3) capacity of central heating of urban hot water
 - (4) total volume of central heating of urban hot water
- 2.2.2 analysis of installed capacity of cogeneration
- 2.2.3 construction trends of cogeneration
 - (1) statistics of new cogeneration projects

2.3 analysis of cost and price of cogeneration

- 2.3.1 cost allocation of cogeneration
 - (1) cost of cogeneration project
 - (2) methods of cost allocation of cogeneration
- 2.3.2 electricity price of cogeneration
 - (1) marketization process of electricity price
 - (2) feed-in tariff of cogeneration

2.3.3 heat price of cogeneration

- (1) heat pricing mechanism
- (2) heat price trends

2.4 analysis of energy conservation of cogeneration industry

2.4.1 calculation model and system

- (1) calculation model
- (2) calculation of economic indicators of heat
- (3) analysis of energy efficiency of cogeneration

2.5 comparison of efficiency of cogeneration and separate generation

2.5.1 economic indicators of cogeneration

- (1) efficiency of heat production of cogeneration
- (2) power ratio of cogeneration

2.5.2 comparison of efficiency advantages with separate generation

- (1) comparison of efficiency advantages with pure thermal power
- (2) comparison of efficiency advantages with heat supply

Chapter 3: Analysis of central heating market of China's cogeneration industry

3.1 analysis of central heating for civil building

3.1.1 infrastructure construction of central heating for civil building

- (1) scale of urban construction area
- (2) scale of urban heating construction area
- (3) construction of urban heating pipe

3.1.2 analysis of central heating in northern regions with heating provision

- (1) overview of central heating in northern regions with heating provision
- (2) distribution of central heating in northern regions with heating provision

3.1.3 analysis of central heating for civil building in northeast China

- (1) heating equipment capacity of power plant in the northeast
- (2) total heating capacity of power plant in the northeast
- (3) planning of central heating for civil building in the northeast

3.1.4 analysis of central heating for civil building in North China

- (1) heating equipment capacity of power plant in the north
- (2) total heating capacity of power plant in the north
- (3) planning of central heating for civil building in the north

3.1.5 analysis of central heating for civil building in Northwest China

- (1) heating equipment capacity of power plant in the northwest
- (2) total heating capacity of power plant in the northwest

3.2 analysis of central heating for industrial user

3.2.1 status quo of central heating for industrial user

3.2.2 analysis of central heating for industrial user in Anhui

- (1) heating equipment capacity of power plant in Anhui
- (2) total heating capacity of power plant in Anhui
- (3) planning of central heating for industrial user in Anhui

3.2.3 analysis of central heating for industrial user in Shandong

- (1) heating equipment capacity of power plant in Shandong
- (2) total heating capacity of power plant in Shandong
- (3) planning of central heating for industrial user in Shandong

3.2.4 analysis of central heating for industrial user in Zhejiang

- (1) heating equipment capacity of power plant in Zhejiang
- (2) total heating capacity of power plant in Zhejiang
- (3) planning of central heating for industrial user in Zhejiang

Chapter 4: Analysis of China's industrial enterprises' self-built power plant

4.1 analysis of power plant construction in oil industry

4.1.1 analysis of demand for thermoelectricity in oil industry

4.1.2 construction of power plant by PetroChina

- (1) thermoelectric installation capacity of PetroChina
- (2) planning of thermoelectric installation of PetroChina

4.1.3 construction of power plant by Sinopec

- (1) thermoelectric installation capacity of Sinopec
- (2) planning of thermoelectric installation of Sinopec

4.2 analysis of power plant construction in chemical industry

- 4.2.1 analysis of demand for thermoelectricity in chemical industry
- 4.2.2 thermoelectric installation in key industries
 - (1) thermoelectric installation in fertilizer industry
 - (2) thermoelectric installation in salt chemical industry
- 4.2.3 planning of thermoelectric installation in chemical industry
- 4.3 analysis of power plant construction in light industry**
 - 4.3.1 analysis of demand for thermoelectricity in light industry
 - 4.3.2 thermoelectric installation capacity in papermaking industry
 - 4.3.3 planning of thermoelectric installation in papermaking industry
- 4.4 analysis of power plant construction in non-ferrous metallurgical industry**
 - 4.4.1 analysis of demand for thermoelectricity in non-ferrous metallurgical industry
 - 4.4.2 thermoelectric installation capacity in aluminum smelting industry
 - 4.4.3 planning of thermoelectric installation in aluminum smelting industry

Chapter 5: Analysis of major equipment market of China's cogeneration industry

- 5.1 analysis of coal-fired boiler market**
 - 5.1.1 analysis of scale of coal-fired boiler market
 - 5.1.2 analysis of main producers of coal-fired boiler
 - 5.1.3 analysis of development trend of coal-fired boiler
- 5.2 analysis of waste heat boiler market**
 - 5.2.1 analysis of scale of waste heat boiler market
 - 5.2.2 analysis of main producers of waste heat boiler
 - 5.2.3 analysis of development trend of waste heat boiler
- 5.3 analysis of back pressure steam turbine market**
 - 5.3.1 analysis of scale of back pressure steam turbine market
 - 5.3.2 analysis of main producers of back pressure steam turbine
 - 5.3.3 analysis of development trend of back pressure steam turbine
- 5.4 analysis of heat bromine cooler market**
