

# China Smart Grid Industry Report (2016–2021), Market Forecast and Investment Strategic Planning

## 目 录

### CONTENTS

#### Chapter 1: Basic situation of China' s smart grid

##### 1.1 definition of smart grid

- 1.1.1 background of generation of smart grid
- 1.1.2 definition of smart grid
- 1.1.3 main features of smart grid

##### 1.2 advantages and application of smart grid

- 1.2.1 advantages of smart grid
- 1.2.2 main applications of smart grid

##### 1.3 analysis of necessity of smart grid development

- 1.3.1 optimize the energy structure
- 1.3.2 solve regional electricity supply and demand imbalance
- 1.3.3 mitigate the impact of natural disasters on the grid security
- 1.3.4 become a continuing source of power to promote economic development

##### 1.4 analysis of factors influencing development of smart grid

- 1.4.1 analysis of favorable factors
- 1.4.2 analysis of unfavorable factors

##### 1.5 analysis of characteristics of investment of smart grid

- 1.5.1 analysis of characteristics of investment of equipment suppliers
  - (1) analysis of barriers to enter
  - (2) analysis of earning factors
- 1.5.2 analysis of profit model of grid operators

#### Chapter 2: Present situation and enlightenment of development of the international smart grid

##### 2.1 analysis of factors driving the development of smart grid

##### 2.2 analysis of development of the international smart grid

- 2.2.1 brief introduction of development of smart grid in various countries
- 2.2.2 development trends of the international smart grid

##### 2.3 status quo of development and progress of smart grid in America

- 2.3.1 development planning and status quo of smart grid in America
- 2.3.2 analysis of development focus of smart grid in America
- 2.3.3 forecast of smart grid in America

##### 2.4 status quo of development and progress of smart grid in Europe

- 2.4.1 development planning and status quo of smart grid in Europe
- 2.4.2 analysis of development focus of smart grid in Europe
- 2.4.3 related stimulus policies of smart grid in Europe
- 2.4.4 analysis of development trends of smart grid in Europe

##### 2.5 status quo of development and progress of smart grid in Japan

- 2.5.1 development planning and status quo of smart grid in Japan
- 2.5.2 analysis of development focus of smart grid in Japan
- 2.5.3 related stimulus policies of smart grid in Japan
- 2.5.4 research and application of smart grid in Japan

##### 2.6 comparison of development model of the international smart grid

- 2.6.1 analysis of development model of smart grid in the United States, Europe, Japan
- 2.6.2 implications of development of smart grid in the United States, Europe, Japan for China

#### Chapter 3: Development status quo and forecast of China' s smart grid

##### 3.1 analysis of development status quo of China' s smart grid

- 3.1.1 overview of development of smart grid
- 3.1.2 construction and investment of grid
- 3.1.3 construction of grid infrastructure

3.1.4 forecast of construction and investment of grid

### **3.2 development of smart grid in key regions**

3.2.1 analysis of development of smart grid in Beijing

3.2.2 analysis of development of smart grid in Shanghai

3.2.3 analysis of development of smart grid in Jiangsu

3.2.4 analysis of development of smart grid in Zhejiang

3.2.5 analysis of development of smart grid in Fujian

### **3.3 development planning of China's smart grid**

3.3.1 China's smart grid planning - Strong Smart Grid

(1) overall framework

(2) development goals

(3) construction link

(4) construction conditions

(5) technology roadmap

3.3.2 comparison of China's smart grid development planning with other countries

### **3.4 analysis of investment and construction of China's smart grid**

3.4.1 management system of smart grid

3.4.2 policy guidance of smart grid

3.4.3 scale of investment of smart grid

3.4.4 investment structure of smart grid

(1) investment structure of various links

(2) investment structure of various regions

3.4.5 main pilot projects of smart grid

3.4.6 key areas and implementation process of smart grid

### **3.5 development trends and forecast of China's smart grid**

3.5.1 development trends of smart grid

3.5.2 forecast of smart grid

3.5.3 development proposals for smart grid

## **Chapter 4: Market demand and forecast of the link of power generation of China's smart grid**

### **4.1 investment and construction of the link of power generation**

4.1.1 development priority of the link of power generation

4.1.2 development planning of the link of power generation

4.1.3 scale of investment of the link of power generation

4.1.4 status quo of development of the link of power generation

(1) analysis of the total power supply

(2) analysis of structure of power supply

### **4.2 analysis of subdivided markets of the link of power generation**

4.2.1 analysis of distributed power generation market

(1) capacity of distributed power generation

(2) scale of new energy connection

4.2.2 analysis of large-capacity storage market

(1) construction of pumped storage power station

(2) forecast of pumped storage market

(3) market demand of storage battery

(4) forecast of storage battery market

### **4.3 analysis of developments of technology of the link of power generation**

## **Chapter 5: Market demand and forecast of the link of power transmission of China's smart grid**

### **5.1 status quo of investment and construction of the link of power transmission**

5.1.1 development priority of the link of power transmission

5.1.2 development planning of the link of power transmission

5.1.3 scale of investment of the link of power transmission

5.1.4 status quo of development of the link of power transmission

(1) construction of power transmission projects

(2) shortcomings of the link of power transmission

### **5.2 analysis of subdivided markets of the link of power transmission**

5.2.1 construction and investment of UHV

(1) economy of UHV power transmission

- (2) construction plan of UHV grid
- (3) scale of investment of UHV grid
- (4) status quo of construction of UHV grid
- 5.2.2 analysis of market of flexible power transmission
  - (1) market capacity of flexible power transmission equipment
  - (2) production of flexible power transmission equipment
  - (3) latest developments of flexible power transmission projects
- 5.2.3 analysis of market of line monitoring
  - (1) market capacity of line monitoring
  - (2) competition of line monitoring market
  - (3) latest developments of line monitoring
- 5.3 analysis of developments of technology of the link of power transmission**
  - 5.3.1 developments of technology of the link of power transmission
  - 5.3.2 trends of UHV power transmission technology

## **Chapter 6: Market demand and forecast of the link of electricity transformation of China's smart grid**

### **6.1 status quo of investment and construction of the link of electricity transformation**

- 6.1.1 development priority of the link of electricity transformation
- 6.1.2 development planning of the link of electricity transformation
- 6.1.3 scale of investment of the link of electricity transformation
- 6.1.4 status quo of development of the link of electricity transformation

### **6.2 analysis of subdivided markets of the link of electricity transformation**

- 6.2.1 construction and investment of intelligent substation
  - (1) criterion release schedule of intelligent substation
  - (2) analysis of construction of substation project
  - (3) analysis of market demand of intelligent substation
  - (4) latest developments of substation project
- 6.2.2 development of energy-saving transformer market
  - (1) analysis of status quo of market development
  - (2) issuance of product subsidy standards
  - (3) analysis of development trends of the industry
- 6.2.3 development of market of subdivided products
  - (1) traditional relay substation automation system
  - (2) photoelectric transformer
  - (3) complete equipment on-line monitoring system
  - (4) time synchronization system
  - (5) intelligent fault recorder
  - (6) market competition of related equipment

### **6.3 analysis of developments of technology of the link of electricity transformation**

- 6.3.1 overview of technology of smart substation
- 6.3.2 characteristics of technology of smart substation
- 6.3.3 analysis of developments of technology of the link of electricity transformation

## **Chapter 7: Market demand and forecast of the link of power distribution of China's smart grid**

### **7.1 status quo of investment and construction of the link of power distribution**

- 7.1.1 development priority of the link of power distribution
- 7.1.2 development planning of the link of power distribution
- 7.1.3 scale of investment of the link of power distribution
- 7.1.4 status quo of development of the link of power distribution

### **7.2 analysis of subdivided markets of the link of power distribution**

- 7.2.1 analysis of market of intelligent power distribution
  - (1) progress of automatic power distribution in pilot cities
  - (2) market demand of intelligent power distribution
  - (3) forecast of market of intelligent power distribution
  - (4) analysis of market competition of intelligent power distribution
- 7.2.2 analysis of development of microgrid market
  - (1) analysis of application area of microgrid
  - (2) construction of micro-grid project
  - (3) forecast of microgrid

### 7.2.3 analysis of developments of power quality

- (1) China's first solar "micro- power plant " power quality monitoring
- (2) Fujian Electric Power promoted construction of power quality monitoring system

## 7.3 analysis of development\ of technology of the link of power distribution

### 7.3.1 components of automatic power distribution system

### 7.3.2 main purposes of automatic power distribution system

### 7.3.3 the latest technological developments of the link of power distribution

- (1) " automatic power distribution system based on Beidou system " passed the identification
- (2) Huawei successfully deployed the country 's first 4G wireless distribution network
- (3) " research of development trends of future distribution network technology " technology

project passed the acceptance

(4) national standards of " commissioning and acceptance of micro- grid distribution network access system " started

### 7.3.4 development trends of automatic power distribution technology

## Chapter 8: Market demand and forecast of the link of power utilization of China' s smart grid

### 8.1 status quo of investment and construction of the link of power utilization

#### 8.1.1 development priority of the link of power utilization

#### 8.1.2 development planning of the link of power utilization

#### 8.1.3 scale of investment of the link of power utilization

#### 8.1.4 status quo of development of the link of power utilization

- (1) construction of power utilization project
- (2) shortcomings of the link of power utilization

### 8.2 analysis of subdivided markets of the link of power utilization

#### 8.2.1 analysis of market of power utilization information collection system

- (1) status quo of development of power utilization information collection system
- (2) market capacity of power utilization information collection system
- (3) market competition of power utilization information collection system

#### 8.2.2 analysis of market of electric car charging stations

- (1) status quo of development of electric car charging stations
- (2) market capacity of electric car charging stations
- (3) market competition of electric car charging stations
