China Big Data Industry Report (2016-2021), Prospect and Investment Strategy Planning

目 录

CONTENTS

Chapter 1: Overview of basic information of big data industry
1.1 basic concept of big data
1.1.1 definition of big data
1.1.2 characteristics of big data
1.1.3 types of big data
1.1.4 difference between big data and BI
1.2 historical background of generation of big data
1.2.1 advances in information technology
1.2.2 birth and development of the Internet
1.2.3 development and application of cloud computing
1.2.4 development of Things
1.2.5 development of social networks
1.2.6 popularization of intelligent terminals
1.3 role and influence of big data
1.3.1 role and significance of big data
(1) for state and government
(2) for enterprise
(3) for individual
1.3.2 business value of big data
1.3.3 impact and trends of big data
(1) impact on IT industry
(2) impact on IT application
1.4 analysis of big data industry chain
1.4.1 ecosystem of big data
1.4.2 concept of big data industry
1.4.3 composition of big data industry chain
(1) data generation and accumulation
(2) data organization and management
(3) data analysis and discovery
(4) data application and service
1.5 analysis of key technologies of big data
1.5.1 big data and cloud computing
(1) programming model
(2) mass data distribution and storage technology
1) massive data management technology
2) virtualization technology
3) cloud computing platform administration technology
4) parallel computing and parallel algorithms
(3) Web2.0
1) Service-oriented system structure SOA
(4) Cloud security
1.5.2 processing tools of big data
1.6 opportunities and challenges brought by big data
1.6.1 opportunities brought by big data
(1) mining and application of big data become the core
(2) big data brings development opportunities for information security
1) to make business intelligence and information security growth accelerate
1.6.2 challenges brought by big data
(1) talent

(2) technology
(3) information security
Chapter 2: Development status quo of the global big data industry and forecast
2.1 the world has entered the era of big data
2.1.1 scale of storage of big data of the world
2.1.2 regional distribution of big data of the world
2.2 analysis of innovations of the global big data vendors
2.2.1 Hadoop distribution
2.2.2 next generation of data warehouse
2.2.3 analysis platform and application of big data
2.2.4 big data as a service
2.2.5 non- Hadoop big data platform
2.3 status quo and trends of application of big data of the world
2.3.1 foreign data open strategy and wave
2.3.2 status quo of application of foreign big data and economic value
(1) status quo of application of American big data and economic value
(2) status quo of application of European big data and economic value
(3) status quo of application of Japanese big data and economic value
2.3.3 big data has risen to the height of a national strategy
(1) United States proposed development plans for big data
(2) EU plans big data as a priority area of Horizon2020
(3) Japan's new ICT strategy focuses on big data
(4) South Korea launched the strategy of big data center
2.4 review of the global big data industry in.....2013
2.4.1 review of development of the global big data industry in.....2013
2.4.2 hot events of the global big data industry in.....2013
(1) overall development of the technology platform
(2) prevalence of big data machine
(3) enterprises' increase investment into big data
(4) industry giants to accelerate industrial chain layout
(5) emerging enterprises are emerging
2.5 analysis of business model of the global big data industry
2.5.1 value model of endogeny-type big data
2.5.2 value model of exogenous-type big data
2.5.3 value model of parasitic-type big data
2.5.4 value model of product-type big data
2.5.5 value model of cloud computing service type of big data
2.6 market scale of the global big data industry and forecast
2.6.1 scale of the global big data industry and forecast
2.6.2 subdivided market of the global big data and forecast
(1) subdivided market of the global big data
(2) professional service market of big data and forecast
(3) market scale of big data computer and forecast
(4) market scale of big data software and forecast
2.7 analysis of market pattern of the global big data industry
2.7.1 analysis of type of enterprises of the global big data industry
2.7.2 proportion of revenues of the global specializing big data vendors
2.7.3 market pattern of the global specializing big data vendors
2.8 development trends of the global big data industry and problems
2.8.1 development trends of the global big data industry
2.8.2 development trends of the global big data technology
(1) technologies tend to diversify
(2) data analysis platform based on cloud will be further enhanced
(3) gradually expand data analytic set
2.8.3 main problems facing the global big data industry
(1) big data storage technology
(2) data in-depth analysis and mining
(3) data security
(4) privacy protection

Chapter 3: Development status quo of China’s big data industry and forecast
3.1 China’s big data era has come
3.1.1 analysis of the development of Internet
(1) scale of Internet netizens
(2) scale of Internet resources
3.1.2 analysis of the development of social media
(1) news website
(2) network video
(3) search engine
1) instant messaging
(4) network community
(5) microblogging
(6) blog / personal zone
3.1.3 analysis of the development of Things
(1) development status quo of China’s Things industry
(2) development scale of China’s Things industry
3.1.4 analysis of the development of e-commerce
(1) overview of the development of Chinese e-commerce industry
(2) development scale of Chinese e-commerce industry
3.1.5 analysis of the development of mobile devices
3.1.6 analysis of data volume
3.2 Chinese government’s support for big data research
3.2.1 863 plan
3.2.2 major national science and technology projects
3.2.3 development planning of Things during the twelfth-five year period
3.3 analysis of development status quo of China’s big data industry
3.3.1 construction of big data industry chain
3.3.2 analysis of life cycle of big data industry
3.3.3 analysis of market scale of big data industry
3.3.4 distribution of investment of big data application industry
3.3.5 challenges facing the big data industry
3.4 analysis of Chinese application practice of big data
3.4.1 application of big data in economic warning
3.4.2 application of big data in marketing
3.4.3 application of big data in the medical field
3.4.4 application of big data in the financial field
3.5 China’s latest developments in big data in 2012年以来
3.5.1 developments of enterprise big data products and technologies
3.5.2 Zhongguancun big data chain begins to appear
3.5.3 local governments introduced policies to boost the development of big data
3.5.4 Huawei joined British universities to develop "Big Data"
3.6 outlook for China’s big data industry in 2016-2021
3.6.1 forecast of the overall scale of big data industry
3.6.2 forecast of subdivided market of big data industry
(1) forecast of big data infrastructure hardware market
(2) forecast of big data software market
(3) forecast of big data service market
3.7 roadmap for development of Chinese big data industry
3.7.1 roadmap for development of big data industry
Chapter 4: Survey of demand and application trends of Chinese enterprise big data
4.1 background of survey
4.1.1 industry of respondents
4.1.2 scale of respondent enterprises
4.1.3 monthly new data scale of respondent enterprises
4.2 analysis of demand for enterprise big data
4.2.1 problems of enterprise data system architecture
4.2.2 technical problems of data facing enterprises
4.2.3 problems facing enterprise data mining and analysis
4.3 status quo of application and planning of enterprise big data

4.3.1 service provider of enterprise data processing products
4.3.2 investment of enterprise big data
4.3.3 enterprises plans to deploy and open big data solutions
4.3.4 scale of deployment of enterprise big data
4.4 basis for selection of application of enterprise big data
4.4.1 factors for enterprises' considering the selection of data products
4.4.2 enterprises' interest in characteristics of data products
4.4.3 factors for enterprises' considering the selection of service providers
4.5 analysis of trends of application of enterprise big data
4.5.1 enterprises' concerns about new technologies of data management
4.5.2 enterprises' how to treat the future of business intelligence
Chapter 5: Analysis of application value and demand of big data in typical fields
5.1 government
5.1.1 status quo of e-government construction
5.1.2 application demand of government big data
5.1.3 application scenario of government big data
5.1.4 application value of government big data
5.1.5 typical case of application of government big data
5.1.6 forecast of application of government big data
5.2 Telecommunications
5.2.1 application demand of big data of the industry
5.2.2 application scenario of big data of the industry
5.2.3 application value of big data of the industry
5.2.4 typical case of application of big data of the industry
5.2.5 forecast of application of big data of the industry
5.3 Finance
5.3.1 status quo of construction of informatization of the industry
5.3.2 volume and characteristics of data of the industry
5.3.3 application demand of big data of the industry
5.3.4 application scenario of big data of the industry
5.3.5 application value of big data of the industry
5.3.6 typical case of application of big data of the industry
5.3.7 forecast of application of big data of the industry
5.4 Internet
5.4.1 volume and characteristics of data of the industry
5.4.2 application demand of big data of the industry
5.4.3 application scenario of big data of the industry
5.4.4 application value of big data of the industry
5.4.5 typical case of application of big data of the industry
5.4.6 forecast of application of big data of the industry
5.5 Retail
5.5.1 status quo of construction of informatization of the industry
5.5.2 volume and characteristics of data of the industry
5.5.3 application scenario of big data of the industry
5.5.4 application value of big data of the industry
5.5.5 typical case of application of big data of the industry
5.5.6 forecast of application of big data of the industry
5.6 Medical care
5.6.1 status quo of construction of informatization of the industry
5.6.2 volume and characteristics of data of the industry
5.6.3 application scenario of big data of the industry
5.6.4 application value of big data of the industry
5.6.5 typical case of application of big data of the industry
5.6.6 forecast of application of big data of the industry
5.7 Smart city
5.7.1 status quo of construction of smart city
(1) investment scale of smart city and forecast
(2) analysis of IT investment of smart city
5.7.2 application demand of big data of smart city

5.7.3 application value of big data of smart city
5.7.4 typical case of application of big data of smart city
5.7.5 forecast of application of big data of smart city
5.8 Energy
5.8.1 status quo of construction of informatization of the industry
5.8.2 application demand of big data of the industry
5.8.3 application scenario of big data of the industry
5.8.4 application value of big data of the industry
5.8.5 typical case of application of big data of the industry
5.8.6 forecast of application of big data of the industry
5.9 Manufacturing industry
5.9.1 status quo of construction of informatization of the industry
5.9.2 volume and characteristics of data of the industry
5.9.3 application demand of big data of the industry
5.9.4 application scenario of big data of the industry
5.9.5 application value of big data of the industry
5.9.6 typical case of application of big data of the industry
5.9.7 forecast of application of big data of the industry
5.10 Other fields
5.10.1 application demand of big data of education industry
5.10.2 application demand of big data of military industry
5.10.3 application demand of big data of tourism industry
Chapter 6: Strategic layout of big data of domestic and foreign enterprises
6.1 layout of big data of foreign enterprises
6.1.1 IBM
(1) layout lines of big data
(2) market positioning of big data
(3) solution for big data
(4) value to the user
(5) revenue and proportion of big data
(6) analysis of service structure of big data
6.1.2 HP
(1) layout lines of big data
(2) market positioning of big data
(3) solution for big data
(4) value to the user
(5) revenue and proportion of big data
(6) analysis of service structure of big data
6.1.3 Intel
(1) Layout lines of big data
(2) Marketing positioning of big data
(3) Solution of big data
(4) Value to the user
(5) Revenue and proportion of big data
6.1.4 Teradata
(1) Layout lines of big data
(2) Marketing positioning of big data
(3) Solution of big data
(4) Value to the user
(5) Revenue and proportion of big data
(6) Analysis of service structure of big data
6.1.5 Dell
(1) Layout lines of big data
(2) Marketing positioning of big data
(3) Solution of big data
(4) Value to the user
(5) Revenue and proportion of big data
(6) Analysis of service structure of big data
6.1.6 ORACLE

(1) Layout lines of big data
(2) Marketing positioning of big data
(3) Solution of big data
(4) Value to the user
(5) Revenue and proportion of big data
(6) Analysis of service structure of big data
6.1.7 SAP
(1) Layout progress of big data
(2) Marketing positioning of big data
(3) Solution of big data
(4) Value to the user
(5) Revenue and proportion of big data
(6) Analysis of service structure of big data
6.1.8 EMC
(1) Layout progress of big data
(2) Marketing positioning of big data
(3) Solution of big data
(4) Value to the user
(5) Revenue and proportion of big data
(6) Analysis of service structure of big data
6.1.9 Cisco Systems
(1) Layout progress of big data
(2) Marketing positioning of big data
