

China Engineering Trade Center Analysis Report (2016-2021), Development Mode and Investment Strategy Planning

目 录

CONTENTS

Chapter 1: Analysis of engineering trade center construction background and market basis

1.1 positioning and features of engineering trade center

1.1.1 analysis of positioning of engineering trade center

- (1) positioning of engineering trade center
- (2) nature of engineering trade center
- (3) functions of engineering trade center

1.1.2 characteristics of engineering trading center

- (1) clustering features of engineering trade center
- (2) radiation characteristics of engineering trade center
- (3) competitive features of engineering trade center

1.2 market basis of engineering trade center

1.2.1 analysis of vitality of engineering trade center

1.2.2 role of engineering trade center in building circulation

- (1) to standardize operation to promote the construction market
- (2) to solve the phenomenon of poor information exchange
- (3) to improve the transparency of transactions of construction projects
- (4) to ensure maximum fairness evaluation

1.2.3 role of the market operators in engineering trade center

- (1) shift the operator's operating mechanism
- (2) constraint the operator's business behavior

Chapter 2: Analysis of development situation of engineering trade center

2.1 analysis of development status of engineering trade center

2.1.1 analysis of engineering trade center charges

2.1.2 analysis of construction scale of national engineering trade centers

2.1.3 analysis of development status of national engineering trade center industry

- (1) rapid growth in turnover
- (2) business structure analysis
- (3) development status anticipation

2.2 engineering trade center development space

2.2.1 the steady growth of the total construction industry lays a good market foundation for engineering trade center

- (1) total value of China's construction industry to maintain rapid growth
- (2) construction contract amount continues to rise

2.2.2 regional market structure and business development direction of engineering trade center

- (1) bidding agent revenue
- (2) regional structure of project bidding agency
- (3) business structure of project bidding agency

2.2.3 analysis of development of key market areas of engineering trade center

- (1) development of engineering contract
- (2) development of engineering survey and design
- (3) development of construction supervision

Chapter 3: Experience and implications of the development of international physical construction market

3.1 experience of development of physical construction market in developed countries

3.1.1 analysis of the US-led development model

- (1) analysis of "lowest tender" pattern
- (2) analysis of "Pool" mode background
- (3) analysis of information technology management experience

3.1.2 implications of the benign market development of the physical construction

- (1) creating tender conditions of market without bidding
- (2) development "joint operation" mode
- (3) development of the construction market management network

3.2 forecast of the world's most dynamic market over the next decade

- 3.2.1 analysis of the global market share of the regional construction industry
 - (1) regional market analysis
 - (2) application analysis
- 3.2.2 the construction market trends over the next decade

Chapter 4: Analysis of engineering trade center main market and development model

4.1 analysis of engineering trade center business model

- 4.1.1 analysis of engineering trade center business
 - (1) analysis of the scope of traditional business of engineering trading center
 - (2) analysis of new business development of engineering trading center
 - 1) analysis of data service business
 - 2) analysis of IT service business
 - 3) analysis of e-commerce platform service business
 - 4) analysis of training business
 - 5) analysis of publishing business
- 4.1.2 analysis of business model of engineering trade center
 - (1) analysis of "big market" business model pattern
 - (2) analysis of "one stop service" business model
- 4.1.3 operating mode selection of engineering trade center

4.2 business model analysis of engineering trade center

- 4.2.1 four categories of operating mode of engineering trade center
- 4.2.2 large urban trading centers' operating mode
- 4.2.3 SME business model of urban trading centers
- 4.2.4 the construction mode of operation of the new trade center

4.3 engineering trade center's business model

- 4.3.1 analysis of market players
- 4.3.2 build key capabilities
 - (1) expansion of service function
 - (2) perfect computer systems
 - (3) its normative construction
- 4.3.3 core value chain of engineering trade center
 - (1) brand value construction
 - (2) credit system construction

Chapter 5: Analysis of investment demand of engineering trading center business segments

5.1 business development drivers of construction engineering trade center
