

China Tight Gas Industry Report (2016-2021), Economic Benefit Evaluation & Investment Strategy Planning

目 录

CONTENTS

Chapter 1: Review of tight gas industry

- 1.1 definition of tight gas industry
- 1.2 development course of tight gas industry
 - 1.2.1 start-up stage
 - 1.2.2 stable development stage
 - 1.2.3 rapid development stage
- 1.3 market environment of tight gas industry
 - 1.3.1 industry policy environment
 - 1.3.2 industry economic environment
 - (1) analysis of GDP trend
 - (2) analysis of industrial output trend
 - (3) impact of macro environment on the industry
 - 1.3.3 industry technical environment
 - (1) analysis of the number of patent applications
 - (2) changes of the number of patent disclosures
 - (3) analysis of the patent applicant
 - (4) analysis of top technologies

Chapter 2: Current situation and prospects of tight gas industry

- 2.1 analysis of tight gas reserves
 - 2.1.1 evaluation of tight gas reserves
 - (1) classification of tight gas reserves
 - (2) evaluation ideas of tight gas reserves
 - (3) evaluation methods and processes of tight gas reserves
 - 2.1.2 scale of tight gas reserves
 - 2.1.3 distribution of tight gas reserves
- 2.2 analysis of tight gas production
 - 2.2.1 the scale of production of natural gas
 - 2.2.2 the structure of natural gas production
 - 2.2.3 the scale of tight gas production
 - 2.2.4 distribution of tight gas production
- 2.3 development prospects of tight gas industry
 - 2.3.1 growth forecast of proved tight gas reserves
 - 2.3.2 growth forecast of tight gas production
 - 2.3.3 prospects of capacity building of tight gas production

Chapter 3: Recent advances in tight gas industry

- 3.1 latest developments of foreign tight gas expertise
 - 3.1.1 tight gas drilling mode selection
 - 3.1.2 tight gas drilling technology
 - (1) horizontal well
 - (2) directional wells
 - (3) sub-divided laterals
 - (4) slimhole technology
 - (5) coiled tubing drilling
 - (6) casing drilling
 - (7) MPD
 - (8) UBD
 - (9) composite drilling
 - (10) FDP fast drilling technology
 - 3.1.3 tight gas drilling techniques

- (1) Schlumberger tight rock analysis system
- (2) high-resolution well measurement techniques
- (3) 3D geotechnical earth model (MEM)
- (4) drilling liquid and water drilling mud application for tight gas reservoirs

3.1.4 tight gas well completion technology

- (1) well completion technology of over one-stage horizontal openhole
- (2) well completion technology of more than two branches
- (3) crack isolation method of well completion

3.1.5 tight gas fracturing technology

- (1) optimization technique of conventional fracturing operation
- (2) Halliburton fracturing service line
- (3) multi-stage fracturing of horizontal wells

3.2 latest developments of domestic tight gas expertise

3.2.1 geophysical exploration technology

- (1) reservoir prediction technology
- (2) reservoir identification technology
- (3) full digital seismic exploration technology

3.2.2 analysis of tight gas drilling technology

- (1) vertical well and fast drilling technology
- (2) horizontal well and fast drilling technology

3.2.3 analysis of tight gas fracturing technology

- (1) vertical well stratification fracturing technology
- (2) large-scale fracturing technology
- (3) mixed fracturing technology
- (4) horizontal well fracturing technology

3.2.4 modes of tight gas gathering and transportation

3.3 implications of foreign advanced tight gas technology to China

Chapter 4: Development pattern and economic benefit evaluation of tight gas industry

4.1 introduction of tight gas industry development model

- 4.1.1 "5 +1" development model of Sulige gas field
- 4.1.2 "independent development + international cooperation" development model of Yulin gas field

4.2 evaluation of development economic benefits of Sulige gas field

4.2.1 issues to be addressed during achieving economic development

- (1) effective method of reservoir stimulation
- (2) effectively reduce development costs
- (3) natural gas prices has become an important constraint

4.2.2 technical ideas to achieve economic development

- (1) development principles
- (2) to optimize the development of technology
- (3) forecast of gas technical economic indicators
- (4) low-cost development process model

4.2.3 economic evaluation of Sulige gas field development

- (1) single well investment
- (2) operating costs of gas production by unit
- (3) sales taxes and surcharges
- (4) economic estimates of single well

4.3 evaluation of development economic benefits of Yulin gas field

4.3.1 efficient development technology of Yulin gas field

- (1) strengthen gas reservoir dynamic analysis and improve the efficiency of a single well development
- (2) adopt gas reservoir engineering methods to simplify the workload of dynamic monitoring

4.3.2 efficiency evaluation method of Yulin gas field

- (1) gas efficiency classification and criteria
- (2) gas cost composition
- (3) analysis of benefit assessment methods and situation of gas field

Chapter 5: Analysis of development potential of tight gas industry in key areas

5.1 analysis of development potential of Ordos Basin

- 5.1.1 analysis of basin reserves
- 5.1.2 geological characteristics of tight gas

- (1) multi-gas-bearing system, the distribution area is large
 - (2) coal hydrocarbon rocks, high methane content in gas reservoirs
 - (3) poor reservoir properties, strong heterogeneity
 - (4) non buoyancy gathered, ill-defined traps
 - (5) gas reservoir has the typical three-low characteristics, low output of per well
- 5.1.3 tight gas exploration and development course
- (1) exploration stage (prior to 1996)
 - (2) initial stage (1996年以来)
 - (3) rapid development stage (2007 -present)
- 5.1.4 development status of tight gas exploration
- (1) rapid growth in reserves
 - (2) large resource potential
 - (3) yields rising fast
 - (4) innovative technology integration
 - (5) innovation of development model
- 5.1.5 new areas of tight gas exploration and resource potential
- (1) Southern Sulige
 - (2) Jingbian - Takahashi
 - (3) Shenmu - Mizhi
 - (4) southwest of the basin
 - (5) forecast of tight gas output

5.2 analysis of development potential of Sichuan Basin

- 5.2.1 analysis of basin reserves
