

China Vanadium Redox Battery Industry Research Report, Market Demand and Investment Feasibility

目 录

CONTENTS

Chapter 1: Description of the report

- 1.1 definition of vanadium redox battery
- 1.2 client object of the report
- 1.3 definition of the report

Chapter 2: General introduction to vanadium redox battery project

- 2.1 overview of the project
 - 2.1.1 name of the project
 - 2.1.2 organizer of the project
 - 2.1.3 scale and target of the project
 - 2.1.4 main building conditions of the project
 - 2.1.5 amount of investment and benefits of the project
- 2.2 problems and suggestions
 - 2.2.1 problem of source of funding of the project
 - 2.2.2 problem of technology of the project

Chapter 3: Market competition and demand outlook for vanadium redox battery

- 3.1 advantages and disadvantages of vanadium redox battery
- 3.2 competitiveness of vanadium redox battery
 - 3.2.1 analysis of its competitiveness against lead-acid battery
 - 3.2.2 analysis of its competitiveness against nickel-cadmium battery
 - 3.2.3 analysis of its competitiveness against nickel-zinc battery
 - 3.2.4 analysis of its competitiveness against sodium-sulfur battery
 - 3.2.5 analysis of its competitiveness against lithium battery
 - 3.2.6 conclusion
- 3.3 status quo of industrialization of vanadium redox battery
 - 3.3.1 commercial development of the global vanadium redox battery
 - (1) vanadium redox battery technology originated in Japan, Canada
 - (2) vanadium redox battery developed in the United States, Australia
 - (3) vanadium redox battery booms in China
 - 3.3.2 process of commercialization of China's vanadium redox battery
 - 3.3.3 problems of industrialization of China's vanadium redox battery
- 3.4 forecast of market demand for vanadium redox battery
 - 3.4.1 analysis of application areas of vanadium redox battery
 - 3.4.2 forecast of market demand for vanadium redox battery in the field of new energy
 - (1) analysis of market demand for vanadium redox battery in the field of wind power
 - (2) analysis of market demand for vanadium redox battery in the field of photovoltaic field
 - 3.4.3 forecast of market demand for vanadium redox battery in the field of peak-adjustment of power

- 3.4.4 forecast of market demand for vanadium redox battery in the field of communications station

Chapter 4: Analysis of investment environment of vanadium redox battery project

- 4.1 policy environment of the project
- 4.2 economic environment of the project
 - 4.2.1 analysis of total industrial output and industrial structure of Sichuan province
 - 4.2.2 analysis of fixed assets investment and industrial structure of Sichuan province
- 4.3 social environment of the project
 - 4.3.1 status quo of human resources of Sichuan province
 - 4.3.2 talent strategy of Sichuan province - matching the industrial structure adjustment

Chapter 5: Selection of site for vanadium redox battery project

- 5.1 considerations for selection of the site for the project
 - 5.1.1 geographical distribution of raw materials

- (1) distribution and production of the global vanadium ore reserves
- (2) distribution and production of China's vanadium ore reserves
- 5.1.2 regional distribution of downstream application market
 - (1) major distribution areas of new energy
 - (2) regional distribution of smart grid construction area

5.2 construction of the project site and supporting conditions

- 5.2.1 topography, seismic conditions of the project site
- 5.2.2 engineering geology and hydrogeology of the project site
- 5.2.3 traffic conditions of the project site
- 5.2.4 utilities conditions of the project site
- 5.2.5 anti-flood, moisture, drainage facilities of the project site
- 5.2.6 natural resource conditions of the project site

5.3 recommendation of plan for the project site

Chapter 6: Technical scheme, equipment scheme, engineering scheme and materials scheme of vanadium redox battery project

6.1 technical scheme of the project

- 6.1.1 process of the project
 - (1) definition of process
 - (2) requirements for process with advanced technology and economic rationality
 - (3) characteristics of process with higher rates of approval during project application
- 6.1.2 source of technology of the project
 - (1) type of source of technology of the project
 - (2) analysis of source of technology of vanadium redox battery
- 6.1.3 flowchart of the recommended scheme

6.2 equipment scheme of the project

- 6.2.1 main equipment models of the project
- 6.2.2 sources of main equipment of the project
- 6.2.3 major equipment stereotypes of the recommended scheme

6.3 civil engineering scheme of the project

- 6.3.1 content of civil engineering construction of the project
- 6.3.2 special basic civil engineering construction of the project
- 6.3.3 scale of civil engineering construction of the project
- 6.3.4 estimation of construction amount of the project
- 6.3.5 a list of major construction projects of the project

6.4 raw materials supply scheme of the project

- 6.4.1 R & D progress and supply of electrode materials
 - (1) R & D progress
 - (2) supply
- 6.4.2 R & D progress and supply of ion exchange membrane
 - (1) R & D progress
 - (2) supply
- 6.4.3 R & D progress and supply of electrolyte
 - (1) R & D progress
 - (2) supply
- 6.4.4 selection of raw materials of the recommended scheme
 - (1) R & D progress
 - (2) supply

Chapter 7: Analysis of energy saving and water saving of vanadium redox battery project

7.1 analysis of energy consumption of the project

- 7.1.1 analysis of energy supply of site of the project
- 7.1.2 analysis of energy consumption of the project

7.2 analysis of energy saving of the project

- 7.2.1 energy saving goals of the project
- 7.2.2 energy saving measures of the project

7.3 analysis of water saving of the project

Chapter 8: Assessment of environmental impact of vanadium redox battery project

8.1 analysis of typical project cases

- 8.1.1 main contents of environmental impact statement submitted to the Ministry of Environment
 - (1) impact on air environmental

- (2) impact on water environment
- (3) impact on solid waste
