

China High-tech Intermediary Service Industry Report of Development Model and Strategic Plan Analysis (2013-2017)

目 录

CONTENTS

Chapter 1: Development Environment of Technology Intermediary Services Industry in China

1.1 Overview of Intermediary Service Industry

- 1.1.1 definition of technology intermediary service
- 1.1.2 Classification of science and technology intermediary service agencies
- 1.1.3 Characteristics of science and technology intermediary service agencies
- 1.1.4 functions of technology intermediary service institutions

1.2 Role and positioning of technology intermediary service system

- 1.2.1 architecture of technology intermediary service system
- 1.2.2 The elements of science and technology intermediary service system
- 1.2.3 The role of science and technology intermediary service system
- 1.2.4 Positioning of technology intermediary service system

1.3 Policy environment of technology intermediary service industry

- 1.3.1 Intermediary Service's protection system
- 1.3.2 Intermediary Service's support policies
- 1.3.3 Intermediary Service's Development Plan

1.4 technology intermediary service industry's economic environment

- 1.4.1 Analysis of China's national economic development
- 1.4.2 China's economic transformation and innovation
- 1.4.3 economic restructuring and development of technological agency

1.5 management system of science and technology intermediary service industry

- 1.5.1 Chinese management system of science and technology intermediary service institutions
- 1.5.2 foreign countries' management system of science and technology intermediary service institutions
- 1.5.3 recommendations to improve the science and technology intermediary service institutions management

Chapter 2: Development model and inspiration of global technology intermediary service

2.1 Summary of development of the world's science and technology intermediary services

- 2.1.1 Development Background of science and technology intermediary service institutions
- 2.1.2 policy environment of technology intermediary service institutions
- 2.1.3 Development Features of science and technology intermediary service agencies
- 2.1.4 The important role of government agencies

2.2 American development model of technology intermediary service

- 2.2.1 Development environment of science and technology intermediary service industry
- 2.2.2 management system of technology intermediary service
- 2.2.3 service system of technology intermediary service
- 2.2.4 operating mode of technology intermediary service agencies
- 2.2.5 content creation of technology intermediary service
- 2.2.6 Development Status of Technology Intermediary Service

2.3 British development model of technology intermediary service

- 2.3.1 Development environment of science and technology intermediary service industry
- 2.3.2 service system of technology intermediary service
- 2.3.3 operating mode of technology intermediary service agencies
- 2.3.4 Development Status of Technology Intermediary Service

2.4 German development model of technology intermediary service

- 2.4.1 Development environment of science and technology intermediary service industry
- 2.4.2 management system of technology intermediary service
- 2.4.3 service system of technology intermediary service
- 2.4.4 operating mode of technology intermediary service agencies

2.5 Japanese development model of technology intermediary service

- 2.5.1 Development environment of science and technology intermediary service industry
- 2.5.2 management system of technology intermediary service
- 2.5.3 service system of technology intermediary service
- 2.5.4 operating mode of technology intermediary service agencies
- 2.5.5 Development Status of Technology Intermediary Service

2.6 Development revelations from International Intermediary Technology Service

- 2.6.1 analysis of operating characteristics of Intermediary Technology Service in developed countries
- 2.6.2 learning the experience of technology services in developed countries

Chapter 3: Analysis of China' s Technology Innovation Environment and results

3.1 Chinese science and technology' s inputs and outputs

- 3.1.1 Quantity scale of R & D institutions
- 3.1.2 research funding expenditures
- 3.1.3 Financial allocations for technology
- 3.1.4 R & D Human Resources
- 3.1.5 Analysis of scientific output

3.2 China' s National Science and Technology Program

- 3.2.1 863 project
- 3.2.2 National Science and Technology Support Program
- 3.2.3 973 project

3.3 Analysis of high-tech industrial development of China

- 3.3.1 value of the high-tech industry output
- 3.3.2 operating efficiency of high-tech industry
- 3.3.3 Foreign trade of high-tech products
- 3.3.4 The development of national high-tech zones
 - (1) scale of high-tech development zones
 - (2) regional pattern of High-tech Development Zone
 - (3) operational efficiency of High-tech Development Zone
 - (4) employees of High-tech Development Zone
 - (5) innovation effectiveness of High-tech Development Zone

3.4 Statistical analysis of Chinese scientific and technological achievements

- 3.4.1 Analysis of total scientific and technological achievements
- 3.4.2 Sources of scientific and technological achievements
- 3.4.3 Analysis of category of scientific and technological achievements
- 3.4.4 evaluation methods of scientific and technological achievements
- 3.4.5 Distribution of scientific and technological achievements
 - (1) province distribution
 - (2) department distribution

3.5 Promotion and transfer of Chinese scientific and technological achievements

- 3.5.1 promotion form of scientific and technological achievements
 - (1) promotion form of national scientific and technological achievements
 - (2) promotion form of regional scientific and technological achievements
 - (3) promotion form of industrial scientific and technological achievements
 - (4) promotion form of high-tech field' s scientific and technological achievements
 - (5) promotion form of achievements completion
- 3.5.2 Transfer of scientific and technological achievements
 - (1) economic outcomes of technology transfer
 - (2) regional economic outcomes from technology transfer
 - (3) regional income from technology transfer

3.6 Analysis of the application of scientific and technological achievements in China

- 3.6.1 Application Status of scientific and technological achievements
 - (1) application of national application of scientific and technological achievements
 - (2) application of regional application of scientific and technological achievements
 - (3) application of industrial application of scientific and technological achievements
 - (4) application of high-tech field' s scientific and technological achievements
 - (5) application of achievement completion
- 3.6.2 Reasons for the results' not applied or stopping
 - (1) Reasons for not applying or stopping national application of scientific and technological achievements

(2) Reasons for not applying or stopping regional application of scientific and technological achievements

(3) Reasons for not applying or stopping industrial application of scientific and technological achievements

(4) Reasons for not applying or stopping high-tech field's application of scientific and technological achievements

(5) Reasons for not applying or stopping achievement completion

Chapter 4: Summary of current development of Chinese science and technology intermediary service industry

4.1 Analysis of Development Needs of Intermediary Service Industry

4.2 Analysis of Development Characteristics of Intermediary Service Industry

4.2.1 Marketization of system running market

4.2.2 socialization of services

4.2.3 specialization of agency set up

4.2.4 Integration of personnel access

4.2.5 industrialization of Service mode

4.2.6 Organization of Network

4.2.7 internationalization of market behavior

4.3 Analysis of operation of technology intermediary service institutions

4.3.1 Development of science and technology intermediary service organizations

4.3.2 service capacity of technology intermediary service organizations

4.3.3 operating efficiency of technology intermediary service agencies

4.3.4 Development features of science and technology intermediary service institutions

4.4 SWOT Analysis of Development of science and technology intermediary service institutions

4.4.1 advantages of development of science and technology intermediary service agencies

4.4.2 disadvantages of development of science and technology intermediary service agencies

4.4.3 opportunities of development of science and technology intermediary service agencies

4.4.4 threats of development of science and technology intermediary service agencies

4.5 Gap between domestic and international science and technology intermediary service organizations and the reasons for the gap

4.5.1 gap between domestic and international science and technology intermediary service organizations

4.5.2 The reasons for the gap between science and technology intermediary service organizations

4.5.3 Strategies for reducing the gap

Chapter 5: Analysis of Chinese development model of science and technology intermediary service agencies

5.1 operating mode analysis of technology intermediary service agencies

5.1.1 Non-profit service agencies' operating mode

(1) multi-body model

(2) multi-domain crossover model

(3) multi-path model

5.1.2 Profit service agencies' operating mode

(1) operating mode of profit agencies

(2) Comparison of domestic and international science and technology intermediary's operating mechanism

(3) Selection of science and technology intermediary service agencies operating mode

5.2 Management Model of science and technology intermediary service agencies

5.2.1 management model of technology service agencies

(1) governmental management mode

(2) enterprise management mode

5.2.2 Status of management model of China's science and technology intermediary service organizations

(1) Overall management model of scientific and technological agency

(2) efficiency comparison of different management modes of technology intermediaries

(3) . Impact of governmental management model on the development of science and technology intermediary

5.2.3 Management Model of foreign technology agency

(1) Development model

(2) operating mechanism

5.2.4 Management evolution of China's technology agency model

- (1) management model evolution direction
- (2) management model evolution path

5.2.5 change of management mode of technology agency

- (1) Adapting existing technology agency management model
- (2) Establishment of new science and technology intermediaries

5.3 revenue and distribution model of technology intermediary service institutions

5.3.1 Technology agency revenue model

- (1) government funding
- (2) self-supporting type

5.3.2 Technology agency distribution model

5.4 Service models and case studies of technology intermediary service organizations

5.4.1 Integration Type and Case Studies

5.4.2 Introduction of technology Type and Case Studies 5.4.3 demonstration model type and case analysis

5.4.3 Consultation type and Case Studies

5.4.4 Risk management and exploration Type and Case Studies

5.4.5 Agricultural Technology Extension Model and Case Analysis

5.4.6 Technical auction-based Type and Case Studies

5.4.7 capital operation type and case analysis

5.4.8 R & D outsourcing model and analysis

5.4.9 rapid financing model and case analysis

5.4.10 opening-up of technological conditions type and case analysis

5.4.11 Integrated Technology Resource Model and Case Studies

5.5 technological innovation service model of technology intermediary service institutions

5.5.1 Factors

5.5.2 Types

- (1) low integrated, low value-added model
- (2) high integrated, low value-added model
- (3) low-value-added, high integrated services model
- (4) comprehensive, high value-added model

Chapter 6: Analysis of operation of different types of technology intermediary service agencies in China

6.1 Analysis of Productivity Promotion Center's Operation

6.1.1 Basic Overview of Productivity Promotion Center

6.1.2 Development of Productivity Promotion Center

- (1) Initial stage (1992-1997)
- (2) acceleration phase (1998-2002)
- (3) lifting phase (2003-2007)
- (4) stride stage (2008-present)

6.1.3 Build Mode of Productivity Promotion Center

6.1.4 development scale of Productivity Promotion Center

- (1) The overall number
- (2) Industry Productivity Center's number
- (3) Asset size of Productivity Promotion Center
- (4) employees of Productivity Promotion Center

6.1.5 Regional Distribution of Productivity Promotion Center

- (1) Region Distribution
- (2) Regional Patterns
- (3) Central region distribution of demonstration Productivity Center

6.1.6 Composition of Productivity Promotion Center

- (1) legal composition
- (2) way of establishment
- (3) Business Properties
- (4) attribute of geographical scope

6.1.7 Investment into Productivity Promotion Center

- (1) investment scale
- (2) investment structure

6.1.8 Business and Revenue of Productivity Promotion Center

- (1) Changes in total revenue
 - (2) consulting services revenue
 - (3) information services income
 - (4) Technical services revenue
 - (5) training services income
 - (6) Talent and technology intermediary business revenue
 - (7) income from fostering scientific and technological enterprises
- 6.1.9 Productivity Promotion Center Services results
- (1) Quantity of service enterprises
 - (2) Conditions of research institutions and experts
 - (3) cooperation with the international and Hong Kong, Macao and Taiwan
 - (4) increase corporate earnings
 - (5) increase employment for the community
- 6.1.10 Development forecast for Productivity Promotion Center
- (1) Development Planning
 - (2) Major issues
 - (3) Development direction
