China Geothermal Heat Pump Industry Feasibility Analysis Report on Development, 2013-2017

目 录

CONTENTS

Chapter 1: Background Summary of China ground-source heat pump industry
1.1 Overview of ground-source heat pump
1.1.1 the definition of ground source heat pump
1.1.2 the classification of ground source heat pump
1.1.3 the component of ground source heat pumps
1.2 Necessity Analysis of China development of ground source heat pump
1.2.1 the status quo of China energy environment
(1) energy bottleneck has become increasingly prominent
(2) the situation of energy conservation is grim
1.2.2 the need for the development of ground source heat pump in China
(1) the need to build energy development
(2) the need to adjust the energy structure
(3) the effective use of renewable energy
(4) the development direction of HVAC technology
1.3 Feasibility Analysis of China development of ground source heat pump
1.3.1 Resource factors affecting ground source heat pump market development
(1) China geothermal resources and the distribution
(2) the development and utilization of geothermal resources in China
1.3.2 Economic and environmental factors affecting ground source heat pump market development
(1) characteristics of efficient heating and cooling of ground source heat pump
(2) flexible way of heating of ground source heat pump
(3) characteristics of ground source heat pump system--energy saving, environmental protection , applicability and economy
1.3.3 Technical factors influencing the development of ground source heat pump market
(1) Selection of ground source heat pump system
(2) Design basis and design methods of ground source heat pump system
(3) Selection and construction of ground source heat pump equipment
(4) Technical and economic analysis of ground source heat pump application examples
Chapter 2: Development environment of ground source heat pump industry in China
2.1 Policy environment analysis of ground source heat pump industry
2.1.1 industry standards
2.1.2 industry-related policies.....28
2.1.3 the development planning of the industry
2.2 Economic environment analysis of ground source heat pump industry
2.2.1 the status of the domestic economy
(1) GDP growth
(2) Investment in Fixed Assets
(3) The industrial added value growth
(4) the income situation of domestic residents
2.2.2 the domestic macroeconomic outlook
2.3 Technical environmental analysis of ground source heat pump industry
2.3.1 analysis of the industry’s patent applications
2.3.2 the changes in the number of patent disclosure
2.3.3 analysis of the industry’s patent applicants
2.3.4 analysis of the industry’s popular technology
2.4 Opportunities and threats analysis of China ground source heat pump industry
Chapter 3: Analysis of development of China ground source heat pump industry
3.1 Analysis of international ground source heat pump industry development
3.1.1 Analysis of status of the international use of geothermal resources

(1) the world's geothermal resources
(2) the distribution of the world's geothermal resources
(3) the utilization of geothermal resources in the world
3.1.2 Overview of the development of the international ground source heat pump industry
3.1.3 Analysis of the development of major countries' ground source heat pump industry
(1) Analysis of the development of America's ground source heat pump
(2) Analysis of the development of Sweden ground source heat pump
(3) Analysis of the development of Norway ground source heat pump
(4) Analysis of the development of German ground source heat pump
(5) Analysis of the development of French ground source heat pump
(6) Analysis of the development of Swiss ground source heat pump
(7) Analysis of the development of Japanese ground source heat pump
3.1.4 competition of the international ground source heat pump industry
3.1.5 development trend analysis of the international ground source heat pump industry
3.2 Development analysis of China ground source heat pump industry
3.2.1 development process of the China ground source heat pump industry
3.2.2 the current development of China ground source heat pump industry.....50
3.3 Market situation analysis of China ground source heat pump equipment
3.3.1 market development analysis of ground source heat pump hosts
(1) market size analysis of ground source heat pump hosts
(2) enterprise scale analysis
1) analysis of market size
(3) market competition analysis of ground source heat pump hosts
1) analysis of the overall industry competitiveness
1. the overall competitive landscape of the industry
2. competition of business of different nature
3. competition of different brands
2) analysis of foreign companies to compete in China
1. Johnson Controls (Johnson Controls)
2. United States McQuay (McQuay)
3. U.S. Carrier (CARRIER)
4. France SEAT (CIAT)
5. Italy Clemente (CLIMAVENETA)
6. United States Trane (TRANE)
7. American Mammoth Group (Mammoth)
3.3.2 analysis of other equipment products of ground source heat pumps
(1) analysis of radiators
(2) analysis of fan coil
3.4 China Ground Source Heat Pump Project Development Analysis
3.4.1 Overview of China Ground Source Heat Pump Engineering Development
3.4.2 Analysis of China Ground Source Heat Pump Project Bidding
(1) the tender procedure
(2) The Government Procurement of ground source heat pump projects
1) ground source heat pump into the " procurement list energy-saving products in governments "
2) ground source heat pump project size of government procurement
3) successful bidding cases of government procurement of ground source heat pump projects
(3) Summary of ground source heat pump tenders in.....2013
1) 3 Overview of China Classic Ground Source Heat Pump Engineering
3.4.3 market competition analysis of the China ground source heat pump projects
3.5 demand outlook analysis of China ground source heat pump industry
3.5.1 market demand forecast for the China ground source heat pump equipment
3.5.2 market outlook analysis of the China ground source heat pump projects
Chapter 4: Analysis of technology development of China ground source heat pump
4.1 working principles of China ground source heat pump
4.1.1 working principles of ground source heat pump
4.1.2 refrigeration principle of the ground source heat pump
4.1.3 the heating principle of ground source heat pump system
4.2 design methods of China ground source heat pump
4.2.1 the design of the underground system

(1) a closed loop system
(2) an open circulatory system
(3) mixing system
4.2.2 the design of the floor system
(1) fan coil system
(2) the floor heating system
(3) the hybrid cooling system
(4) central air conditioning system
4.3 construction methods of China ground source heat pump
4.3.1 keys to GSHP construction
(1) site reconnaissance
(2) System Design
(3) system installation
(4) On-site construction
4.3.2 construction methods of ground source heat pump
(1) methods and features of shallow geothermal exploration
(2) drilling and completions of water source heat pump system
(3) installation of the heat exchanger on soft soil ground
(4) drilling methods of underground heat exchanger system
(5) Special problems of massive underground heat exchanger system
(6) backfill of underground heat exchanger system
4.4 Technology Research Progress of China Ground Source Heat Pump
4.4.1 Related technology usage of ground source heat pump
4.4.2 Ground-coupled heat pump system’s technology advances
(1) heat transfer model of ground heat exchanger
(2) the backfill material
(3) thermal properties of underground geotechnical and hydrogeological conditions
4.4.3 the study of technology advances of groundwater heat pump system
4.4.4 Research progress of working fluid of the ground source heat pump system
4.4.5 Research progress of complex pump energy systems
4.5 Main problems of and solutions for China ground source heat pump technology applications
4.5.1 technology problems in ground source heat pump
(1) lack of supervision
(2) Engineering Design cohabitation
(3) computing software development lags behind
4.5.2 solutions for problems pf the ground source heat pump technology
(1) technical measures
(2) Management strategies
Chapter 5: Analysis of China Ground Source Heat Pump Application
5.1 application mode of China ground source heat pump
5.1.1 home system
5.1.2 the centralized system
5.1.3 the decentralized system
5.1.4 the hybrid system
5.1.5 the water loop heat pump system
5.2 Status and prospects of ground source heat pump applications in China
5.2.1 application area of the China ground source heat pump
5.2.2 application structure of China Ground Source Heat Pump
