China Power Station Air Cooling Industry Report (2016-2021), Market Forecast and Investment Strategic Planning

目 录

CONTENTS

Chapter 1: Analysis of development environment of power station air cooling industry
1.1 definition and property of power station air cooling industry
1.1.1 definition and classification of power plant air cooling system
(1) definition of power plant air cooling system
(2) classification of power plant air cooling system
1.1.2 basic properties of power station air cooling industry
(1) periodic property
(2) regional property
(3) seasonal property
1.2 analysis of policy environment of power station air cooling industry
1.2.1 regulatory regime of the industry
1.2.2 related policies of the industry
1.2.3 summary of policy environment of the industry
1.3 analysis of economic environment of power station air cooling industry
1.3.1 analysis of GDP growth
1.3.2 analysis of consumption amount of electricity of the whole society
1.3.3 analysis of electricity installed capacity
1.3.4 summary of economic environment of power station air cooling industry
Chapter 2: Analysis of development environment of power station air cooling industry
2.1 introduction of industry chain of power station air cooling industry
2.2 analysis of upstream supply of power station air cooling industry
2.2.1 analysis of supply of steel
(1) analysis of concentration of steel industry
(2) analysis of price trend of steel
(3) analysis of output of steel
(4) analysis of import and export of steel
(5) analysis of apparent consumption amount of steel
(6) analysis of supply of special steel
(7) analysis of proportion of steel in operating costs of power station air cooling manufacturers
(8) analysis of procurement strategy of steel of power station air cooling manufacturers
2.2.2 analysis of supply of composite aluminum material
(1) analysis of price trend of aluminum ingot
(2) analysis of supply of composite aluminum material
(3) analysis of proportion of composite aluminum material in operating costs of power station air cooling manufacturers
(4) analysis of procurement strategy of composite aluminum material of power station air cooling manufacturers
2.2.3 analysis of supply of supporting parts
(1) analysis of supply of fan
(2) analysis of supply of motor
(3) analysis of supply of reducer
(4) analysis of supply of expansion joint
(5) analysis of proportion of supporting parts in operating costs of power station air cooling manufacturers
(6) analysis of procurement strategy of supporting parts of power station air cooling manufacturers
2.3 analysis of downstream demand of power station air cooling industry
2.3.1 analysis of demand for power station air cooling system in thermal power industry

(1) analysis of investment and construction of thermal power industry
(2) analysis of distribution of power plant construction regions
(3) analysis of demand for power station air cooling system in thermal power industry
2.3.2 analysis of demand for power station air cooling system in nuclear power industry
(1) analysis of investment and construction of nuclear power industry
(2) analysis of distribution of nuclear power plant construction regions
(3) analysis of demand for power station air cooling system in nuclear power industry
Chapter 3: Analysis of scale and pattern of power station air cooling industry
3.1 overview of development of power station air cooling industry
3.1.1 overview of development of foreign power station air cooling industry
3.1.2 overview of development of domestic power station air cooling industry
3.2 analysis of scale of development of power station air cooling industry
3.2.1 analysis of scale of construction of power station air cooling system
3.2.2 analysis of scale of use of power station air cooling system
3.2.3 analysis of proportion of application of power station air cooling system
3.3 analysis of business model of power station air cooling manufacturers
3.3.1 analysis of design model of power station air cooling manufacturers
(1) main design approaches taken by power station air cooling manufacturers
(2) main features of design of power station air cooling industry
3.3.2 analysis of manufacturing model of power station air cooling manufacturers
3.3.3 analysis of sales model of power station air cooling manufacturers
3.4 analysis of competition pattern of power station air cooling industry
3.4.1 analysis of competitive landscape of the international power station air cooling industry
3.4.2 analysis of competitive landscape of domestic power station air cooling industry
Chapter 4: Analysis of technology and product of power station air cooling industry
4.1 analysis of technology of power station air cooling industry
4.1.1 analysis of development of power station air cooling technology
(1) analysis of development of direct air cooling technology
(2) analysis of development of indirect air cooling technology
(3) analysis of development of wet and dry cooling technology
(4) analysis of development trends of power station air cooling technology
4.1.2 analysis of design technology of power station air cooling system
(1) analysis of thermal calculation technology
(2) analysis of large pipeline design technology
(3) analysis of finned tube optimization design technology
(4) analysis of electrical and control system design technology
4.1.3 analysis of generation and manufacturing technology of power station air cooling system
(1) analysis of fin manufacturing technology
(2) analysis of finned tube manufacturing technology and bundle assembly technology
4.1.4 analysis of patent applications of power station air cooling industry
(1) overall situation of patent applications of power station air cooling industry
(2) leading enterprises in patent applications of power station air cooling industry
4.2 analysis of product of power station air cooling industry
4.2.1 comparative analysis of power station cooling system
4.2.2 comparative analysis of power station air cooling system
4.2.3 analysis of market of direct air cooling system products
(1) analysis of manufacturers of direct air cooling system
(2) analysis of case of application of direct air cooling system
(3) forecast of application of direct air cooling system
4.2.4 analysis of market of indirect air cooling system products
(1) analysis of manufacturers of indirect air cooling system
(2) analysis of case of application of indirect air cooling system
(3) forecast of application of indirect air cooling system
Chapter 5: Analysis of operation of leading enterprises of power station air cooling industry
5.1 analysis of operation of leading power plant air cooling system design enterprises
5.1.1 analysis of operation of Swiss IHW Design Consortia
(1) introduction of Swiss IHW Design Consortia
(2) analysis of undertaken projects of Swiss IHW Design Consortia in China

(3) analysis of competitiveness of power station air cooling system design business of Swiss IHW Design Consortia
5.1.2 China Power Engineering Consulting Group Corporation
(1) brief introduction of the company's development
(2) analysis of the company's organizational structure
(3) analysis of the company's qualification and honor
(4) analysis of the company's operation performance
(5) analysis of the company's power station air cooling system design technology
(6) analysis of case of the company's power station air cooling system design
(7) analysis of competitiveness of the company's power station air cooling system design business
5.1.3 Shanxi Electric Power Design Institute
(1) brief introduction of the company's development
(2) analysis of the company's qualification and honor
(3) analysis of the company's operation performance
(4) analysis of the company's power station air cooling system design technology
(5) analysis of case of the company's power station air cooling system design
(6) analysis of competitiveness of the company's power station air cooling system design business
5.2 analysis of operation of leading power plant air cooling system manufacturing enterprises
5.2.1 GEA
(1) brief introduction of GEA's development
(2) analysis of investment layout of GEA in China
(3) analysis of operators of GEA's power plant air cooling business in China
(4) analysis of GEA's power plant air cooling products and technology
(5) analysis of performance of GEA's power plant air cooling business
(6) analysis of competitiveness of GEA's power plant air cooling business
(7) analysis of trends of GEA's power plant air cooling business
5.2.2 SPX
(1) brief introduction of SPX's development
(2) analysis of investment layout of SPX in China
(3) analysis of operators of SPX's power plant air cooling business in China
(4) analysis of SPX's power plant air cooling products and technology
(5) analysis of performance of SPX's power plant air cooling business
(6) analysis of competitiveness of SPX's power plant air cooling business
(7) analysis of trends of SPX's power plant air cooling business
5.2.3 Beijing Shouhang AiQiWei Energy Saving Technology Co., Ltd.
(1) brief introduction of the company's development
(2) analysis of the company's main business
1) analysis of the company's major economic indicators
(3) analysis of the company's profitability capability
(4) analysis of the company's operation capability
(5) analysis of the company's solvency capability
(6) analysis of the company's development capability
(7) analysis of the company's power station air cooling system products and technology
(8) analysis of case of application of the company's power station air cooling system
(9) analysis of competitiveness of the company's power plant air cooling business
(10) analysis of trends of the company's power plant air cooling business
there are another 3 enterprises
Chapter 6: Analysis of investment prospects of power station air cooling industry
6.1 analysis of characteristics of investment of power station air cooling industry
6.1.1 analysis of entry barriers of power station air cooling industry
(1) analysis of technical barrier
(2) analysis of performance barrier
(3) analysis of financial barrier
6.1.2 analysis of profit level of power station air cooling industry
6.1.3 analysis of profit model of power station air cooling industry
6.2 analysis of development prospect of power station air cooling industry
6.2.1 analysis of favorable factors of development of power station air cooling industry

6.2.2 analysis of unfavorable factors of development of power station air cooling industry
6.2.3 forecast of development of power station air cooling industry
6.3 analysis of risks of investment of power station air cooling industry
6.3.1 risk of macro economic cyclical fluctuations
6.3.2 risk of substitution of power generation by renewable energy
6.3.3 risk of slowdown of power plant construction
6.3.4 risk of stability of market competition
6.3.5 risk of price fluctuations in raw materials
6.3.6 risk of seasonal fluctuations of performance
6.4 proposals for investment of power station air cooling industry
6.4.1 analysis of status quo of investment of power station air cooling industry
6.4.2 analysis of trends of investment of power station air cooling industry
6.4.3 proposals for investment of power station air cooling industry
(1) proposals for development of power station air cooling technology
(2) proposals for development of power station air cooling products
(3) proposals for development of power station air cooling system market
